

ROUND BALE HANDLING EQUIPMENT

TOTE & ROLL

The TOTE-N-ROLL features single cylinder operation, an exclusive! Both pickup arms are controlled by one hydraulic cylinder (not included) mounted within the main frame. This not only means single lever operation, but allows for misalignment of the tractor when backing up to the bale.

MANUAL TRANSPORT

Bale Transport can be attached to either pickup or tractor. The Bale Transport comes with 12 volt electric cab operated winch and utilizes the same 3 Point Base and our unique tapered wedging forks. Spike will not work satisfactorily on Bale Transport but can be used on 3 Point Base or Hi-Lift.

Bale Forks when mounted on the Bale Transport have three inches of floatation on each side to allow for uneven terrain.

BASE & SPIKE complete with HI LIFT

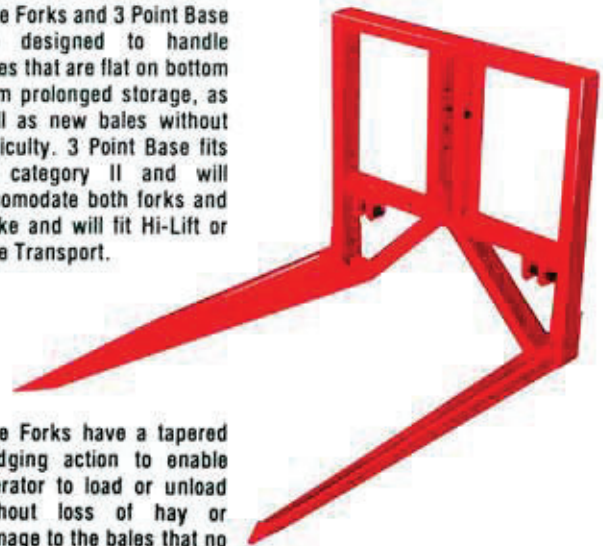

Place bales easily on trucks, pickups, or stacks with the Hi-Lift using either Bale Forks or a Bale Spike. Forks or Spike mount on the same 3-Point Base.

The Hi-Lift easily mounts on category II 3 point, or category III 3 point, that can be converted to category II with spacer bushings. It uses a standard 8" tractor cylinder allowing 80 degrees of movement.

3-POINT BASE WITH FORK

Bale Forks and 3 Point Base are designed to handle bales that are flat on bottom from prolonged storage, as well as new bales without difficulty. 3 Point Base fits on category II and will accommodate both forks and spike and will fit Hi-Lift or Bale Transport.

Bale Forks have a tapered wedging action to enable operator to load or unload without loss of hay or damage to the bales that no longer have twine on them.
