DISC MOWERS

- 1 The mowing unit articulated joint is conceived to obtain the best adaptation to the ground contour. Cuts along edges and slopes are thus obtained without problems.
- 2 In case of obstacles there is a mechanism which pulls back the mowing unit so that the blow is immediately warded off. The mechanism resetting is obtained through the reverse movement.
- 3 Adjustment spring: this spring allows the mowing unit pressure adjustment on the ground, following the ground consistence.
- 4 Detail of the peculiar oval disc shape and of the helicoidal section knives.
- 5

Easy transport

SPECIFICATIONS		DM 4	DM 5	DM 6	DM 7
