

Seedbed Mulch Tucker

Model SMT-8 Shown with Standard Equipment

The Seedbed Mulch Tucker fills a niche in the seeder operations of many specialty jobs. Primarily used after the seeder operation is complete and the mulch is blown on, the Seedbed Mulch Tucker helps anchor the mulch into the seedbed while enhancing seed to soil contact. This operation is often mandated by many federal, state and municipal seeding jobs. The Seedbed Mulch Tucker is available in 6 and 8 foot sizes and can be ordered with just the Tucker assembly or with both the Tucker and Pulverizer assemblies.
